TELCO

ITU-T X.800-X.849 series –

Supplement on security baseline for network operators

Summary

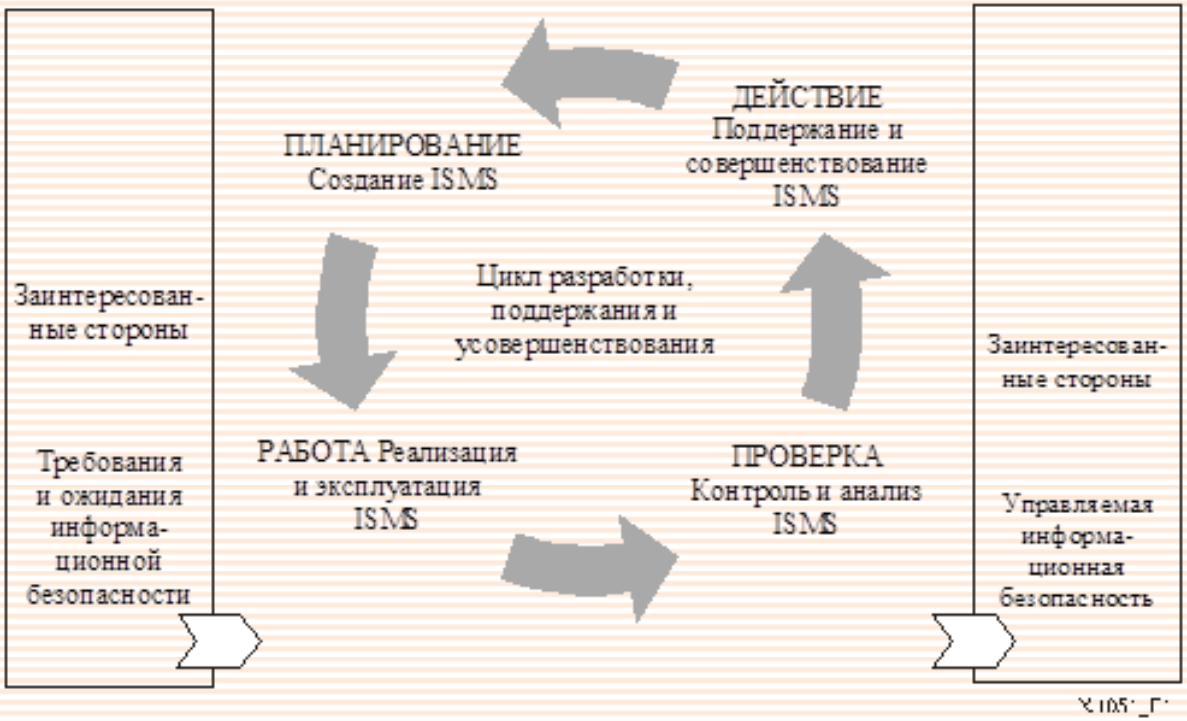
Supplement 2 to ITU-T X.800 series of Recommendations **defines a security baseline** against which network operators can assess their network and information security status in terms of readiness and ability **to collaborate** with other entities (operators, users and law enforcement authorities) to counteract information security threats.

This supplement can be used by network operators to provide meaningful criteria against which each network operator can be assessed if required.

TELCO

ITU-T X.1051 (02/2008)–

Система управления информационной безопасностью – Требования к электросвязи (ISMS T)



TELCO

ITU-T X.1051 (02/2008)–

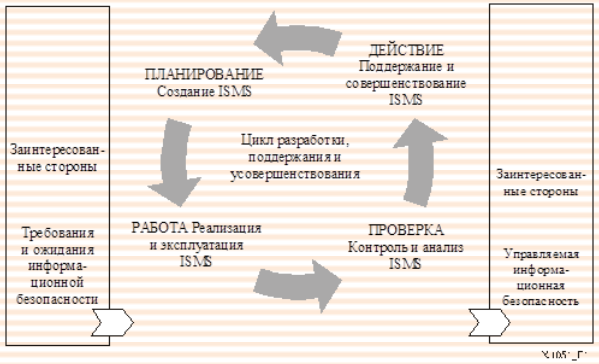
Настоящая Рекомендация основана на стандарте BS 7799-2:2002.

В Приложении к BS 7799-2:2002 содержится перечень целей управления ISMS и заявки о соответствии управления.

Они основаны на ISO/IEC 17799:2000.

Настоящая Рекомендация согласуется также с ISO 9001:2000 и ISO 14001:1996, чтобы обеспечивать согласованные и единые реализацию и функционирование с Рекомендациями, относящимися к управлению.

Она согласуется также и с Рек. МСЭ-Т X.800 и X.805.



TELCO

ITU-T Rec. X.1051 | ISO/IEC 27011:

a) establishes guidelines and general principles for initiating, implementing, maintaining, and improving information security management in telecommunications organizations based on ISO/IEC 27002;

b) provides an implementation baseline of information security management within telecommunications organizations to ensure the confidentiality, integrity and availability of telecommunications facilities and services.

As a result of implementing this Recommendation | International Standard, telecommunications organizations, both within and between jurisdictions, will:

a) be able to assure the confidentiality, integrity and availability of the global telecommunications facilities and services;

b) have adopted secure collaborative processes and controls ensuring the lowering of risks in the delivery of telecommunications services;

c) be able to redeployed resources to more productive activities;

d) have adopted a consistent holistic approach to information security;

e) be able to improve personnel awareness and morale, and increase public trust.

Objective

The objectives of this Recommendation | International Standard are to provide practical guidance specially suited for telecommunications organizations on:

a) commonly-accepted goals of information security management specifically suited for telecommunications organizations;

b) information security management practices to assist in the building of confidence for telecommunications activities.
